

Meeting Minutes: Health Technology Initiatives

Date: August 8, 2025

Attendees: Tim Cook (CEO), Jeff Williams (COO), Kevin Lynch (VP of Technology), Dr. Sumbul Desai (VP Health), Eddy Cue (SVP Services)

1. Discussion on Next-Gen Health Features

The meeting focused on the roadmap for future health-related features in Apple Watch, iPhone, and new wearable devices. The team reviewed progress on clinical trials and discussed potential regulatory hurdles.

2. Key Discussion Points

- **Non-Invasive Glucose Monitoring:** The technical and clinical feasibility of integrating this technology into Apple Watch.
- **Sleep Apnea Detection:** The accuracy of using existing sensors to identify early signs of sleep apnea.
- **Partnerships with Medical Institutions:** The value of collaborating with hospitals and universities for data collection and validation.
- **Data Privacy and Security:** Ensuring all health data remains encrypted and on-device.

3. Action Items

- **Jeff Williams (COO):**
 - Work with the hardware team to begin prototyping the next-generation Apple Watch sensor suite.
- **Kevin Lynch (VP of Technology):**
 - Provide an updated technical feasibility report on non-invasive glucose monitoring.
- **Dr. Sumbul Desai (VP Health):**
 - Secure new partnerships with key medical research institutions for clinical trials.
 - Submit an updated timeline for regulatory approval processes.
- **Eddy Cue (SVP Services):**
 - Begin work on a new subscription service model for advanced health analytics.

4. Risk Items

- **Tim Cook (CEO):** The FDA approval process for new medical features is long and complex, posing a risk of significant delays.
- **Jeff Williams (COO):** Integrating a new, highly-sensitive sensor into a device as small as the Apple Watch is a significant engineering challenge.
